SUMMARY

Aspiring Machine Learning Engineer specializing in Machine Learning, Deep Learning, and Natural Language Processing (NLP). Experienced in building end-to-end AI solutions using Python, TensorFlow, and Keras, with a strong focus on Cybersecurity, Computer Vision, and Predictive Analytics. Currently seeking opportunities in Machine Learning, Deep Learning, NLP, and Data Science domains to contribute and grow in the field of Artificial Intelligence.

TECHNICAL SKILLS

- **Programming Languages** : Python, SQL.
- **Machine Learning** : Supervised Learning, Unsupervised Learning, Classification, Regression, Feature Engineering, Model Evaluation.
- **Deep Learning** : Artificial Neural Network (ANN), Convolutional Neural Network (CNN), Recurrent Neural Network (RNN), LSTM.
- **Natural Language Processing (NLP)** : Text Preprocessing, Tokenization, Sequence Padding, Text Classification.
- **Libraries & Frameworks** : NumPy, Pandas, Scikit-learn, TensorFlow, Keras, OpenCV, Matplotlib.
- **Deployment & Tools** : Streamlit, Flask, Git, GitHub, Jupyter Notebook, VS Code.

PROJECTS

- 1. Intrusion - X : Real-Time Network Intrusion Detection System (RNN/LSTM/GRU) | [GITHUB](#)**
 - Developed a deep learning-based intrusion detection system to identify malicious network activities in real time.
 - Implemented RNN, LSTM, and GRU architectures to analyze sequential network traffic patterns and detect anomalies.
 - **Tech Stack** : Python, TensorFlow, Keras, Pandas, Scikit-learn, Streamlit
- 2. Neo - Inspect — Industrial Surface Defect Detection System (CNN) | [GITHUB](#)**
 - Designed a CNN-based computer vision model for automated industrial surface defect detection.
 - Applied image preprocessing, augmentation, and normalization techniques to enhance model performance.
 - **Tech Stack** : Python, TensorFlow, Keras, OpenCV, Streamlit
- 3. Retain IQ — Employee Attrition Prediction System (ANN) | [GITHUB](#)**
 - Built an Artificial Neural Network (ANN) model to predict employee attrition risk in organizations.
 - Performed data cleaning, encoding, scaling, and feature selection for optimal model training.
 - **Tech Stack** : Python, NLP, TensorFlow, Keras
- 4. Cancer Risk Prediction System — Machine Learning (Logistic Regression) | [GITHUB](#)**
 - Developed a Logistic Regression based classification model for cancer prediction.
 - Performed data preprocessing, feature scaling, and model evaluation using ML techniques.
 - **Tech Stack** : Python, Scikit-learn, Pandas, NumPy

EDUCATION

<

CERTIFICATION

- **DELLOITE :-** Data Analytics, Technology & Cyber Virtual Experience Programs (Forage)
- **TATA :-** Generative AI & Data Analytics Virtual Experience Programs (Forage)
- **BCGX :-** Generative AI Virtual Experience Program (Forage)

ACHIEVEMENTS

- Secured **3rd Rank** in overall Diploma (Polytechnic) academic performance with **86.23%**.
- Secured **2nd Rank** in **final year** project competition at college level.
- Developed multiple **Machine Learning** and **Deep Learning** projects across **ANN, CNN, RNN, NLP, and predictive analytics domains**.
- Built and implemented end-to-end solutions using **Python** and **modern ML/DL frameworks**.
